

Is it valuable?

Is it difficult to replace?

Is it an inconvenience if stolen?

Does it need recharging?

The beauty of the new highly secure and durable SafeCharge locker is that it contains optional charging equipment.

So while your organisation's laptops, mobile phones, cameras, power tools, portable satellite navigation or mobile communication equipment is tucked away safely, it can also be recharged. If it has an AC/DC adaptor, our locker can recharge it. *(Whilst we love the recharging option, don't forget that non charging lockers are available.)*

The new neat and stylish heavy duty 2mm thick metal lockers are available with a choice of either ten or fifteen individual compartments. You can also decide whether access is made to each locker by high quality lock or swipe card. An optional security bar locked tight with a padlock gives extra peace of mind if you need it. *(We've been trying to get into our locker with screwdrivers, hammers, clamps and knives and we can assure you it's a very tough cookie.)*

If you can see that the unique qualities of this innovative locker will stop your security headaches or provide less 'down time' lost to recharging, then please ask us to tell you more. *We're so proud of it, we may even show you its baby album!*

Field staff?

Students?

Laptop users?

Builders?

Photographers?

Visitors with valuables?
